

# **Automatic Storage Management Complimentary to 3<sup>rd</sup> Party Storage Stack**

**Product Presentation**  
Oracle Corporation

# The Problem

Local file systems – too slow

RAW – fast but complex

NAS/NFS – too slow, but easy to manage

Cluster FS/VM – expensive and slow, but easy to manage

SAN FS – expensive, slow, complex but cross  
platform

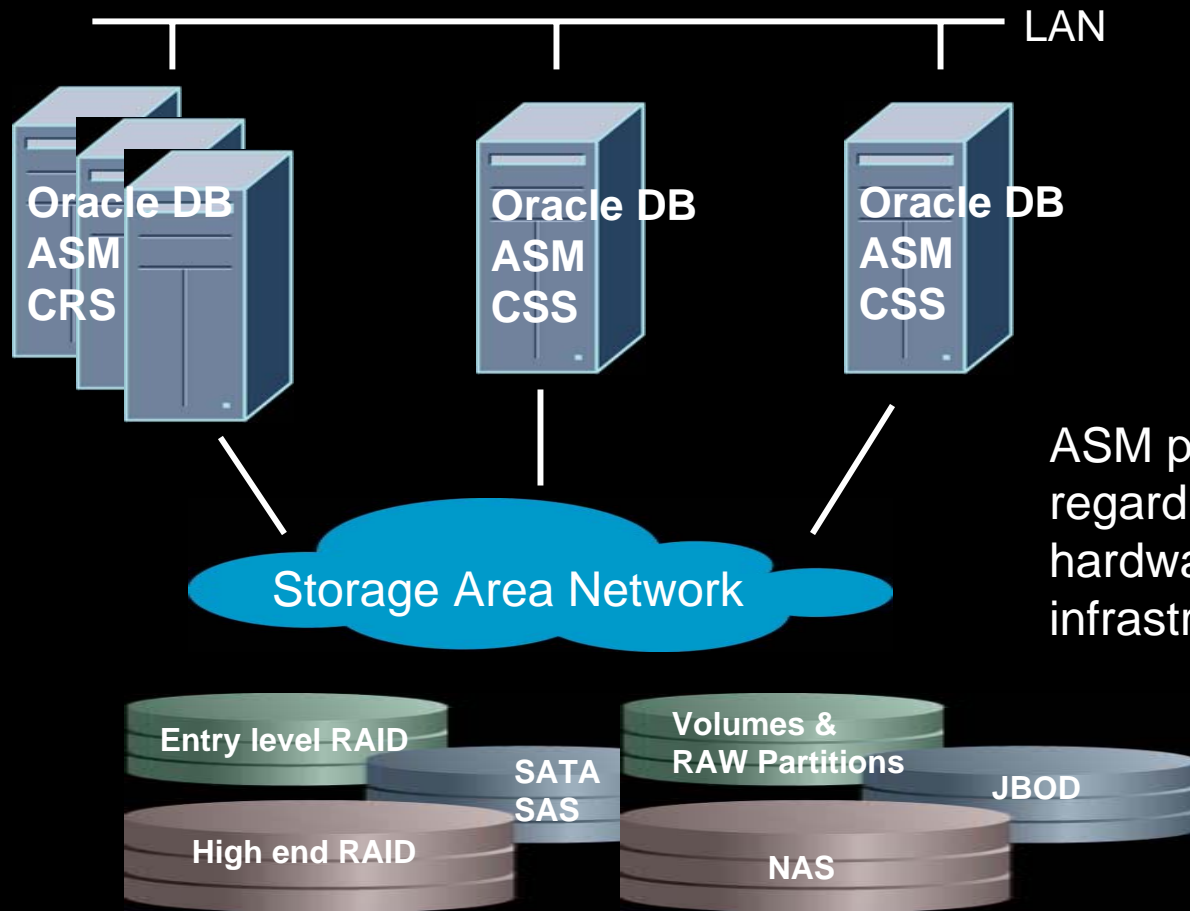

# Automatic Storage Management

A Database File System which provides cluster file system and volume manager capabilities that are integrated into the Oracle database 10g kernel at no additional cost

Reduce Cost and Complexity Without Compromising Performance or Availability

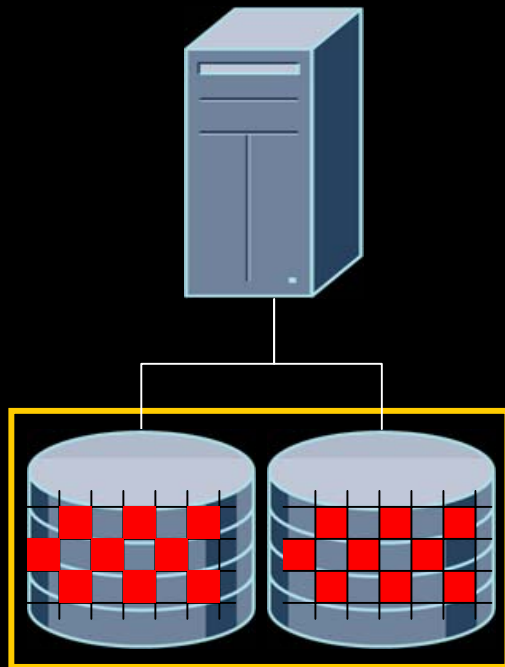

# ASM Cluster Architecture

ASM provides value regardless of the type of hardware/software storage infrastructure

# ASM Disk Group (File System)

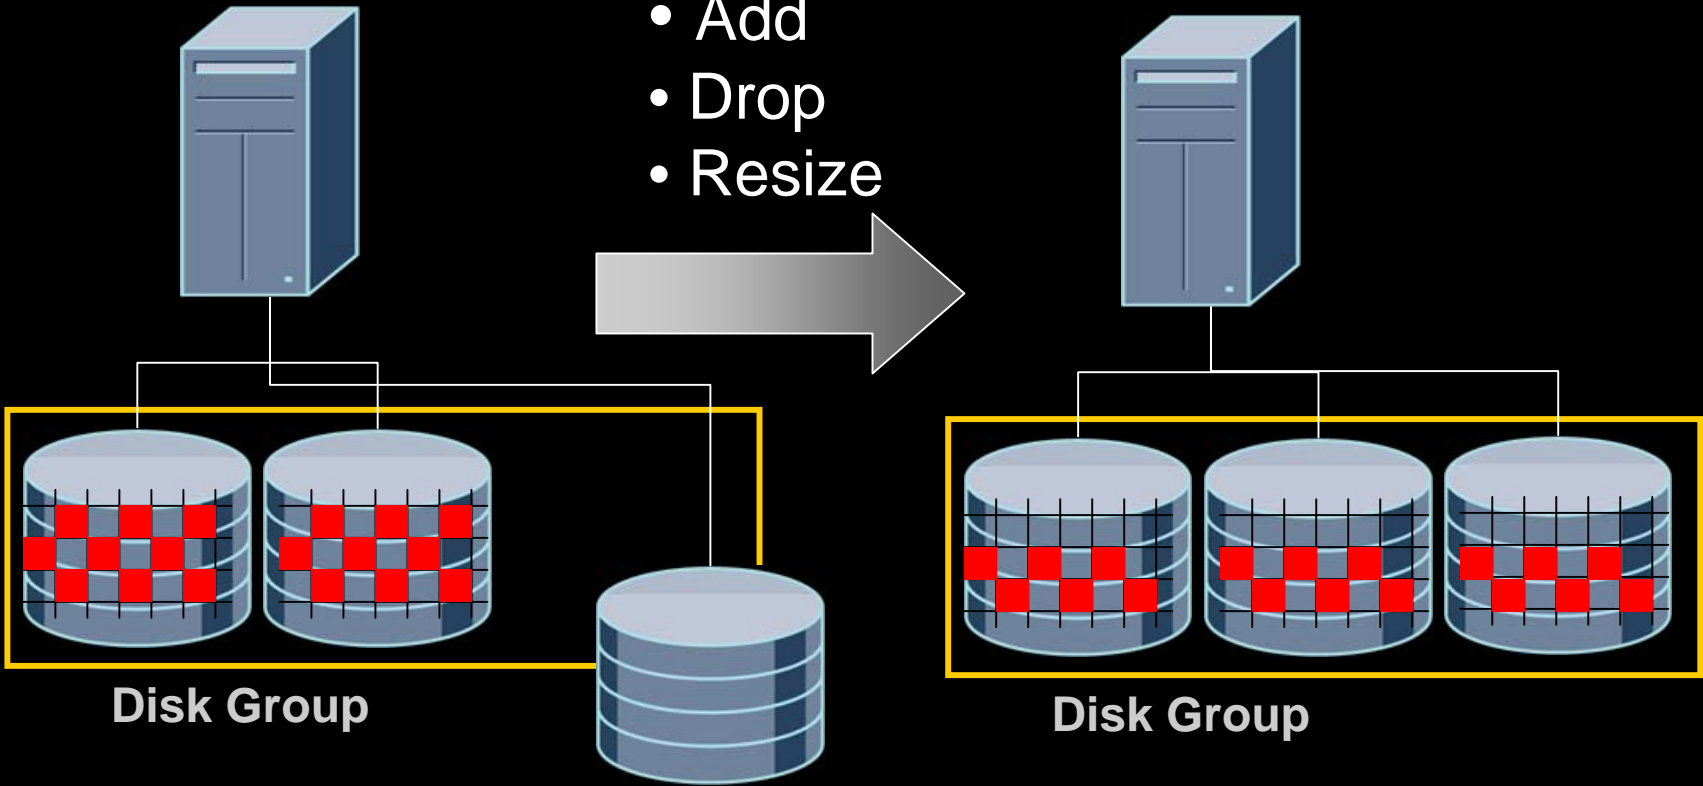

Disk Group

- Virtualizes Storage Entities
  - A pool of storage entities (disk, LUN, volume, partition, FS files) managed as a logical unit
  - No more moving files from point A to B – ever
- Auto Distributes Data Files
  - ASM spreads each Oracle file evenly across all disks in a disk group

No more islands of volumes and LUNs

# Dynamic Capacity Management

- Add
- Drop
- Resize

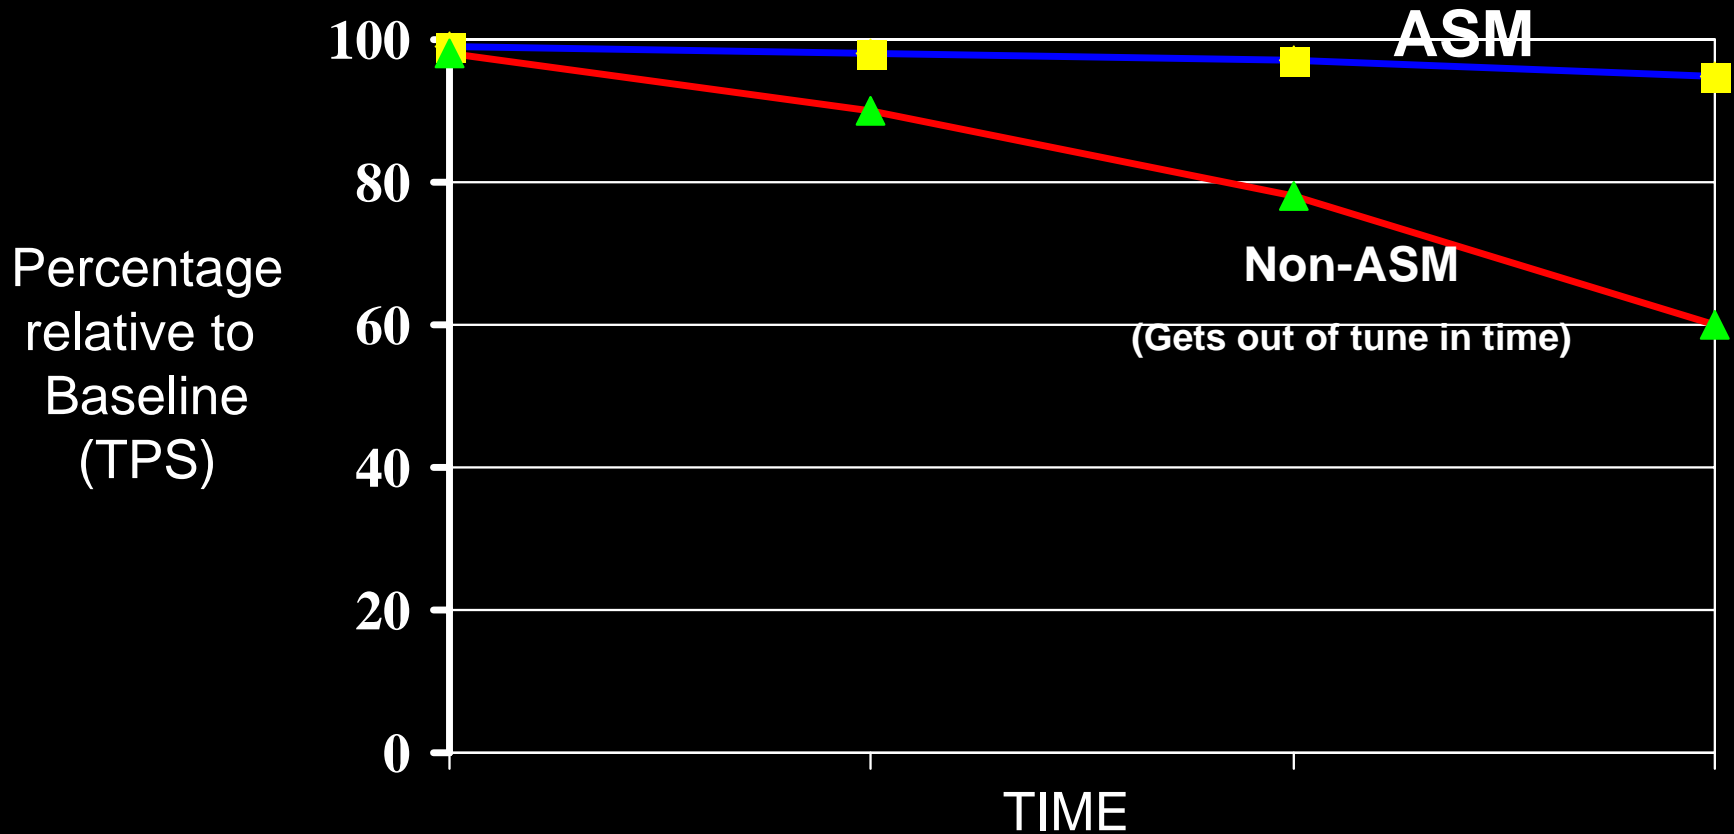

# Auto Data Distribution

- Efficient relocation of data during rebalance
- No more hot spots - eliminate manual I/O tuning
- Optimal performance

# No Performance Degradation Over Time

# Automatic File Naming

## ASM Leverages Oracle Managed Files (OMF)

- Simplifies database administration
  - Specifies operation in terms of ‘objects’ vs ‘files’
  - Automates database file naming I.e. datafiles, redo logs, archive logs, recovery files, etc...
  - Reduces mistakes by admins specifying the wrong file name
  - Reduce wasted disk space consumed by obsolete files – Create and delete automatically

# Improving Storage Utilization

## Before ASM

Conventional wisdom

- Pre-allocate storage
- Difficult to add/remove storage
- Leave headroom to grow

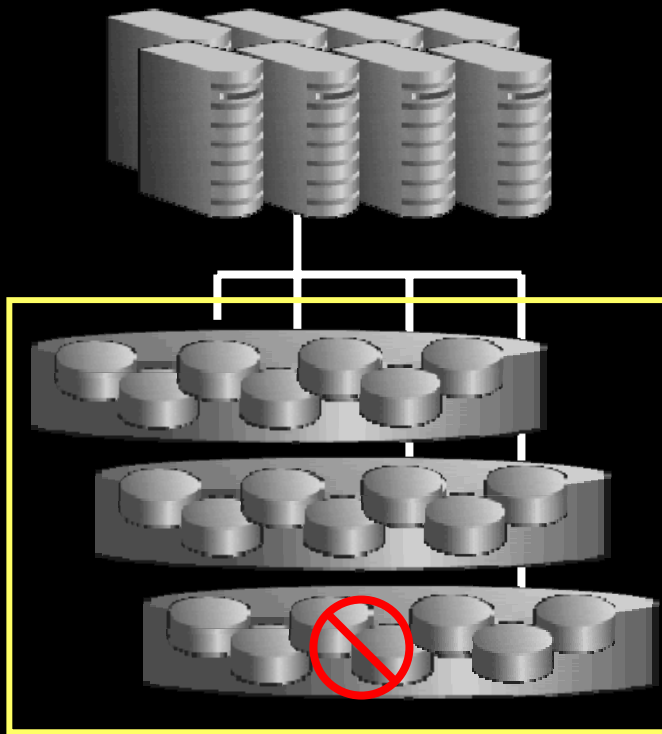

## With ASM

Provisioning storage when you need it... and save money

- Allocate what you need
- Simple to add or remove when needed
- Save time and money

# Intelligent Mirroring Options

ASM Disk Group

Flexible redundancy choices

- Efficient extent-based mirroring and striping
- 2-way or 3-way mirroring
- Can leverage external RAID protection

Empower low cost computing

# Single Vendor Integration

- Bundled with Oracle database 10g
- Integrated and tested through Oracle's standard QA processes
- Single Install/Configuration through Oracle standard tools (OUI/DBCA)
- No finger pointing- Single vendor support
- No additional cost!

Simplify &  
Automate

Increase  
Utilization

Predictable  
SLAs

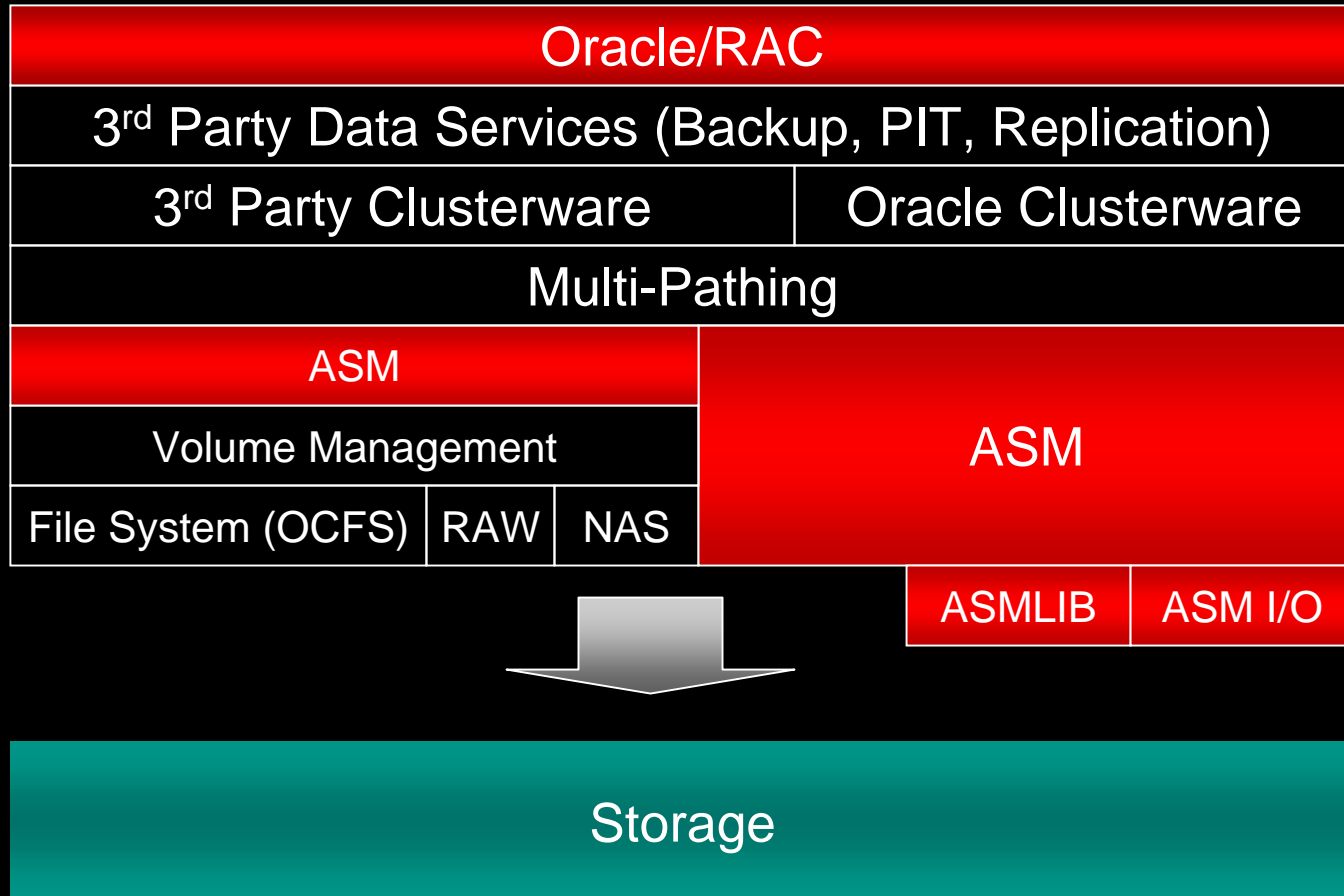

Save  
\$\$\$

# Significantly Reduces Total Cost of Ownership

TCO Categories	Cost Overhead ASM	Cost Overhead Non-ASM
Cluster file system	Free	
Cluster VM	Free	
Over provisioning (storage utilization)		
Management Overhead		
Support Fees	Included w/DB	
Downtime		

# Software Stack

# Lower Cost and Complexity Without Compromising Performance or Availability

- **Simplify and Automate Database Storage management**

- Fraction of the time is needed to manage database files

- **Increase Storage Utilization and Agility**

- Eliminate over provisioning and maximize storage resource utilization with more flexibility

- **Predictably Deliver on Service Level Agreements**

- Never get out of tune delivering high performance similar to RAW - sustained over time
- Uncompromised availability empowering low cost storage deployment reliably
